The following pressure injuries* are presented on Stan Stage 4 Pressure Injury Model™

1. Stage 4 Pressure Injury with eschar, subcutaneous fat, undermining, tunneling, slough, exposed bone (with osteomyelitis) and rolled wound margins

2. Early* Stage 3 Pressure Injury with subcutaneous fat and pale granulation tissue (Early* as there is no wound contraction present)

* We have included the most likely etiology-based descriptions, but realize many wounds can appear in the same location, having different etiologies. The definitive diagnosis is up to the clinician and interprofessional wound care team.

Care Instructions: To clean your model VATA recommends soap and warm water. Some customers have found applying a barrier/skin prep can give them the adhesion they are looking for.
