1. Description

The diesel engine is an internal combustion engine which requires four strokes to work (intake, compression, ignition or power stroke and exhaust stroke) wherein the mixture of air and fuel ignites of its own accord.

The crankshaft conveys the force and also controls the changes in the gas mixture.

2. Operation

Additionally recommended:

Overhead Projector (230 V, 50/60 Hz) 1003264
or
Overhead Projector (115 V, 50/60 Hz) 1003263

- Lay the transparency on the daylight projector.
- Move the components by hand to the places which correspond to the various strokes.
